## 2024\_28\_III\_OOPS Using Java Lab

### 2028\_REC\_OOPS using Java\_Week 8\_Q3

Attempt : 1

Total Mark : 10

Marks Obtained : 10

#### **Section 1 : Coding**

##### **1. Problem Statement**

In a user registration system, there is a requirement to implement a username validation module. Users attempting to register must adhere to specific criteria for their usernames to be considered valid.

Your task is to develop a program that takes user input for a desired username and validates it according to the following rules:

The username must not contain any spaces. The username must be at least 5 characters long.

Implement a custom exception, InvalidUsernameException, to handle cases where the entered username does not meet the specified criteria.

##### ***Input Format***

The input consists of a string S, representing the desired username.

### ***Output Format***

If the username is valid, print "Username is valid: [S]" .

If the username is invalid:

1. If the username is short, print "Invalid Username: Username must be at least 5 characters long"
2. If the username contains spaces, print "Invalid Username: Username cannot contain spaces"

Refer to the sample output for formatting specifications.

### ***Sample Test Case***

Input: John

Output: Invalid Username: Username must be at least 5 characters long

### ***Answer***

```
// You are using Java
import java.util.*;

class InvalidUsernameException extends Exception {
    public InvalidUsernameException(String msg) {
        super(msg);
    }
}

public class Main {

    public static void validateUsername(String s) throws
    InvalidUsernameException {
        if (s.contains(" ")) {
            throw new InvalidUsernameException("Invalid Username: Username
cannot contain spaces");
        }
        if (s.length() < 5) {
            throw new InvalidUsernameException("Invalid Username: Username must
be at least 5 characters long");
        }
    }
}
```

```
public static void main(String[] args) {  
    Scanner sc = new Scanner(System.in);  
    String s = sc.nextLine();  
  
    try {  
        validateUsername(s);  
        System.out.println("Username is valid: " + s);  
    }  
    catch (InvalidUsernameException e) {  
        System.out.println(e.getMessage());  
    }  
}
```

**Status : Correct**

**Marks : 10/10**
